The central columns with bell-capitals are 70 feet high and nearly 12 feet in diameter; the others are smaller and lower, with lotus-bud capitals, supporting a roof lower than that over the three central aisles. A clearstory of stone-grated windows makes up the difference in height between these two roofs. The interior, thus lighted, was splendid with painted reliefs, which helped not only to adorn the hall but to give scale to its massive parts. The whole stupendous creation was the work of three kings--Rameses I., Seti I., and Rameses II. (XIXth dynasty).
